

# Kubernetes Advisory: A Powerful Combination

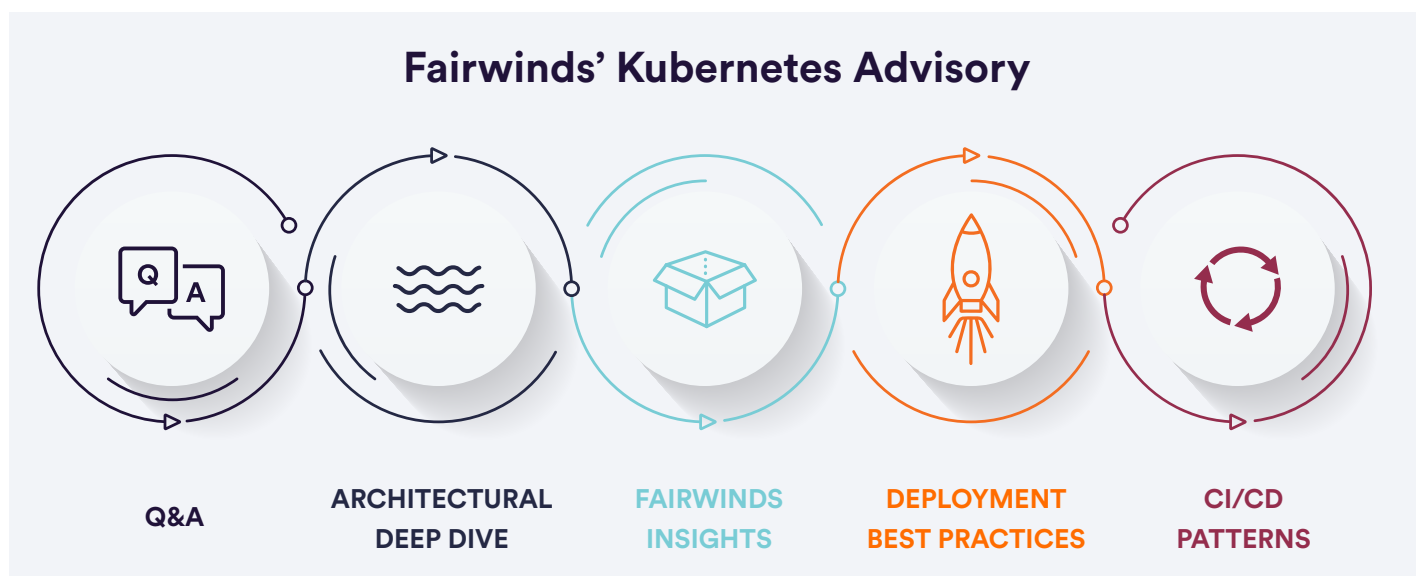

Software and Expertise Enable Reliable,  
Scalable, and Secure Kubernetes

Fairwinds' Kubernetes Advisory includes Fairwinds Insights, providing site reliability engineering (SRE) expertise at your fingertips and Kubernetes governance software to continuously monitor your configurations for compliance, security, efficiency, and reliability best practices.

This advisory service uses Insights to scan your Kubernetes application and infrastructure, alerting you to any issues in your K8s environment. The Advisory service proactively identifies Kubernetes configuration problems and helps your team understand how to remediate issues.

Fairwinds' Kubernetes Advisory provides support, including:

- Slack-based question and answer support during daytime support hours (9AM - 5PM ET)
- Monthly status meetings to review open Q&A requests and any publicly announced Common Vulnerabilities and Exposures (CVEs) that impact Kubernetes
- Architectural deep dive and implementation support
- Fairwinds Insights auditing tools for Kubernetes to improve cluster security, workload reliability, and engineering productivity for pager-triggered production incidents
- Deployment best practices and advice, using tested open source software
- CI/CD patterns to follow for a tested framework that helps you build, push, and deploy applications

## ADVISORY SERVICES

Kubernetes is complex with further complexity every time clusters, users and teams are added. There are different configuration and requirements, and a host of security, compliance, cost, and complexity concerns. It's a challenge for organizations to make sense of the chaos of Kubernetes.

Kubernetes Advisory clients can save up to 40 hours per month per engineer by leveraging Fairwinds expertise and software during their Kubernetes journey. Backed by Fairwinds' Kubernetes Advisory, you can:

- Learn and deploy Kubernetes without risking project delays
- Enable your engineering resources to focus on your applications and services
- Save money by leveraging SRE expertise to scale workloads efficiently and reliably

## WHY FAIRWINDS

Fairwinds is your trusted partner for Kubernetes security, policy and governance. With Fairwinds, customers ship cloud-native applications faster, more cost effectively, and with less risk. We provide a unified view between dev, sec, and ops, removing friction between those teams with software that simplifies complexity. Fairwinds Insights is built on Kubernetes expertise and integrates our leading open source tools to help you save time, reduce risk, and deploy with confidence.
